

Paint Protection Film

Care & Maintenance

Taking proper care of your PPF is required to maintain warranty coverage.

Wipe Regularly

Wiping bugs, road grime, and dust off your PPF with a wet, soft cloth is essential.

You can use a spray protectant after wiping.

Wash Often

Give your PPF the deep clean it needs by washing with an automotive soap and soft wash mitt.

Avoid bug & tar removers or soaps that contain harsh chemicals.

Wax Quarterly

Applying a wax on a quarterly basis (or more) will add an extra layer of protection. Use a liquid cream or spray wax which is recommended for use on PPF.

DO NOT:

Pressure Wash

High pressure nozzles should be avoided as they can damage PPF.

Use Harsh Chemicals

Solvents & other aggressive chemicals can cause hazing or even irreversible damage.

Apply Ceramic Coatings

Permanent or semi-permanent ceramic coatings, environmental coatings, or similar products will void the PPF warranty.

Use Abrasive Tools

Brushes, dirty rags or cloths, compounds or other abrasive tools can scratch or damage your PPF.

Wipe Against Edges

If you have a non-wrapped edge, clean with the edge, not against.
